

EVCS-OBZ Bezel

Product Manual

The EVCS-OBZ is a stainless steel flush bezel for the EVCS-OSA and EVCS-OSC EVCS Outstations, and provides a professional stainless steel finish.

The front of the Type A or C Outstation should protrude by 10mm to allow the door to open fully in operation.

The cut out for the panel should be as shown above, taking care to pack the depth to a maximum of 95mm.

Once the panel is mounted, the bezel should be fixed in place using either double sided tape, bathroom sealer or mastic.
